DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-25, and 28, drawn to multi-particulate formulations comprising an oligonucleotide, carrier particles, and a penetration enhancer, classified in class 536, subclass 23.1.
 - II. Claims 26-27, drawn to methods of delivering a biologically active substance across a mucosal membrane, classified in class 435, subclass 455.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the formulation of invention I could potentially be used to deliver oligonucleotides across non-mucosal membranes, for example, bacterial cell membranes. Additionally, the formulations of invention I could be used in a method for identifying the expression of a gene in a population of cell, wherein said gene comprises a sequence that is complementary to the sequence of the oligonucleotides in said formulations.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1635

4. Additionally, it is noted that claim 3 recites multiple patentably distinct oligonucleotide sequences, wherein said oligonucleotide sequence is selected from the group consisting of SEQ ID NO: 1, 2, 3, 4, 5, 6, and 7. Since the sequences correspond to structurally distinct nucleotide sequences, wherein each sequence requires an independent search and consideration of the prior art, these sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121 and 37 CFR 1.141 et seq. Accordingly, in most cases, only one (1) independent and distinct nucleotide sequence will be examined in a single application without restriction. The search of no more than one sequence may include the complements of the selected sequences and, where appropriate, may include subsequences within the selected sequences. Thus with the election of invention I, as set forth above, the applicant is required to selected one nucleotide sequence from the group consisting of SEQ ID NO: 1, 2, 3, 4, 5, 6, and 7.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
